SPORTident Config+

The new version of SI Config is radically different from the earlier versions and not only program units it also installs firmware, personalises si sticks and makes coffee.

Go to:

http://www.sportident.com/index.php?option=com_content&view=article&id=106&Itemid=2633&Iang=en

Download the latest version of SPORTident Config+

Install this on your computer. Open it. If you have not plugged in your master unit then you will not see anything listed under Devices in the upper left corner.

When you do plug it in it the master will show - click on it and you will be offered the very familiar Direct / Remote.

Take some time to look at the icons to the right of the home button.

Click on Firmware. It will most likely tell you it cannot do anything because it wants a control sitting on the master unit to play with.

As soon as you put on a a control and click firmware you get this screen

Now you will be ready to play:

Note the details of the unit you are programming are on the left side.

Now click on Start Update- You will get a message about what you are doing. There is a Don't Show me this again box- click it or otherwise you will get it every time you upgrade a unit. This is boring enough without having an extra task to do.

The unit I used for this demo had already been updated hence the message.

Sometimes you will get a not ready message. Click on retry. If that fails try turning on the unit with an si stick. If that doesn't work mmm you may have a problem. Go to the settings mode

Memory:	128 K				-		6				
Firmware:	623 🚫						0	Cancel			

When it gets to 99& the unit beeps twice and then you get the following

Click close put on the next unit and start all over again.

The unit you just took off will need to be turned off.

Remember to update the firmware in your master unit (use Direct not remote)

Now what about programming units- Click on the Settings button

The Airt stuff is for the latest stuff of proximity punching. You will see that it is greyed out.

To get to this you need to change from Control to SIAC on (I think)but that is something we will come top terms with next year I believe.
