## Scoring Explanation

A pace score is calculated for every current club member who completes a course. The best 10 pace scores for each club are summed to obtain that club's Pace score. An individual's pace score is their race pace in min/km divided by an age factor (see table below) and then converted back to a score out of 10 . An age adjusted pace of $5 \mathrm{~min} / \mathrm{km}$ or faster earns 10 points,
$10 \mathrm{~min} / \mathrm{km}$ earns 5 points, $15 \mathrm{~min} / \mathrm{km}$ earns 3.3 points and $20 \mathrm{~min} / \mathrm{km}$ earns 2.5 points, etc.
The club turnout score is calculated as the ratio of the number of current club members who entered (online + EOD) divided by the total current club membership from Eventor on the Sunday evening of the event, expressed as a percentage

A club's maximum possible score for an event is 200 - This would be achieved if the best ten performances all score $10(10 \times 10$ $=100$ ) and every club member enters the event (100\%).

[^0]
[^0]:    Age factors are derived from an average of the $\mathrm{min} / \mathrm{km}$ rates of the first two place getters in each class at the Australian Long
    Distance Champs for the five years 2014-18. The age factor for each age class is its average $\mathrm{min} / \mathrm{km}$ rate divided by the M21
    average $\mathrm{min} / \mathrm{km}$ rate, subject to slight smoothing of outliers.
